PROFESSIONAL SUMMARY

Full-stack Software Developer with 2+ years of experience building and supporting production applications using Java/Spring Boot and Angular/React across enterprise Agile teams. Independently architected and built a multi-tenant SaaS platform covering JWT-based security, HLD/LLD system design, automated testing, and DevSecOps CI/CD pipelines. Track record of resolving cross-stack production incidents and shipping reporting/export APIs under sprint deadlines. Strong problem-solving foundation through consistent Data Structures & Algorithms practice.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript
- **Backend:** Spring Boot, Spring Security, REST APIs, Microservices, Servlet API
- **Frontend:** React.js, Angular, HTML, CSS, Tailwind CSS
- **Database & Cache:** PostgreSQL, MySQL, MongoDB, Redis
- **Testing:** Selenium, JUnit, Mockito
- **DevOps & Tools:** Git, GitHub Actions, Docker, CodeQL, Gitleaks, Dependabot, CI/CD
- **Practices:** Agile/Scrum, Jira, Confluence, HLD/LLD Design, System Design, Data Structures & Algorithms

WORK EXPERIENCE

Software Developer | HCL Technologies

Mar 2025 – Present

- Work on an enterprise application for a global pharmaceutical/life sciences client, as part of a ~20-member Agile team using Jira and Confluence for sprint tracking.
- Developed Export APIs in Spring Boot supporting data extraction and reporting for the module, reducing manual export turnaround by an estimated 25%.
- Diagnosed and resolved 15+ cross-stack production bugs spanning Angular, Spring Boot, and SQL-based data layers, improving module stability during active sprints.
- Investigated and resolved production incidents (data mismatches, performance bottlenecks, functional blockers) within a ~20-member Agile team, maintaining minimal downtime for a client-facing enterprise module.

Junior Software Engineer | Profit.co, Madurai

Apr 2024 – Mar 2025

- Contributed to the OKR Management System, implementing features that refined project management and goal-tracking workflows for customer accounts.
- Optimized existing APIs by profiling execution time and identifying bottlenecks, improving response times by up to 20% on affected endpoints.
- Used Elasticsearch for efficient data storage, retrieval, and indexing, supporting fast search across large datasets.

PROJECT — CONSTRUCTION WORKFORCE MANAGEMENT PLATFORM

Multi-tenant B2B SaaS platform digitizing workforce management, site progress tracking, and payroll computation for construction companies. Independently co-architected and built end-to-end as a two-developer team.

- Designed a multi-tenant architecture with full HLD/LLD documentation, covering JWT-based stateless authentication, OTP verification, and Google OAuth onboarding.
- Built core modules: Employee & Project Management (role-based hierarchy for Admins/PMs/Supervisors), Geo-fenced Daily Attendance & Logs, Payroll & Cost Tracking, and Real-time Analytics Dashboards.
- Used Redis for caching, API rate-limiting, and OTP TTL management, improving response performance and securing auth flows.
- Built the backend with Java 21, Spring Boot, Spring Security, and PostgreSQL with Flyway migrations; frontend with React.js, Vite, and Tailwind CSS.
- Wrote automated test coverage (Selenium, JUnit, Mockito) across core application modules to catch regressions before merge.
- Set up a full DevSecOps pipeline: GitHub Actions CI/CD, CodeQL and Gitleaks secret scanning, Dependabot dependency updates, branch protection, and CODEOWNERS-enforced cross-review — cutting manual release steps and catching vulnerabilities pre-merge.
- Planned AI-driven roadmap: LLM-based natural language queries (Gemini API), predictive analytics for budget/delay forecasting, and computer-vision-based attendance verification.

EDUCATION

B.Tech, Information Technology | Mepco Schlenk Engineering College

2020 – 2024

- CGPA: 7.56 / 10

Higher Secondary Education (HSC) | SBK Boys Higher Secondary School

2019 – 2020

- 76.1%
